**Dear Hiring Manager,**

I am thrilled to apply for the Data Analytics internship position at The Sleep Company. With an M.Sc. IT specializing in Artificial Intelligence and a CGPA of 9.04, I have also completed my Data Science course and am certified as a Python programmer, SQL developer, and AI/ML specialist.

My hands-on experience includes:

- Sign Language Detection: A model to detect hand signs using TensorFlow, OpenCV, and Python.
- Student Performance Predictor: An ML project with CI/CD Pipeline using GitHub Actions, AWS, and Docker.
- Power BI Dashboards: Created analytical dashboards for pizza sales, superstore sales, and patients' waiting lists.
- AutoInsight: An automated tool for EDA and ML tasks.
- Kaggle Competitions: Achieved a top 21% rank in 10+ competitions.

I excel at analyzing complex datasets using Power BI, Python, and SQL to uncover insights and drive decision-making. My projects and Kaggle achievements demonstrate my ability to translate data into actionable strategies.

I believe my skills and experience align well with your requirements and will enable me to contribute effectively to The Sleep Company's mission and success.

**Best Regards,**

Shlok Shivkar
